

Pipeline Research Council International, Inc.

Damage Prevention & Right of Way Monitoring for Operating Pipeline Systems

*Confronting the Challenges through
Research Programs*

PHMSA 2009 R&D Forum

Washington, DC

June 24, 2009

Mark Piazza, Program Manager

LEADING PIPELINE RESEARCH

Presentation Topics and Overview

2

- **Damage Prevention – Drivers & Challenges**
- **Successes of Current Research Programs**
- **Building on the Successes & Addressing the Next Series of Challenges for the R&D Community**

PRCI Membership Drives Research

3

- **38 Energy Pipeline Operating Companies**
 - *25 Natural Gas Transmission; 11 Liquid*
 - *2 Operators - both Liquid and Natural Gas Transmission*

- **World-wide Research Organization**
 - *26 U.S. Companies*
 - *12 Non-U.S. (Brazil, Canada, Europe, Saudi Arabia)*

- **14 Associate Members**
 - *U.S.; Canada; Mexico; Japan*

- **Total mileage represented ~355,000 miles**

LEADING PIPELINE RESEARCH WORLDWIDE

- Applus RTD
- Association of Oil Pipe Lines (AOPL)
- Berg Steel Pipe Corp.
- Boardwalk Pipelines
- BP
- Buckeye Partners, LP
- Cameron Compression
- CenterPoint Energy Gas Transmission
- Chevron Pipe Line Company
- Colonial Pipeline Company
- Colorado Interstate Gas
- Columbia Gas Transmission Corp.
- ConocoPhillips Pipe Line Company
- Dominion Transmission Corp.
- Dresser-Rand Corporation
- El Paso Natural Gas
- Enbridge Energy Partners, LP
- EPCO, Inc.
- Explorer Pipeline Company
- ExxonMobil Pipeline Company
- GE Oil & Gas
- Lincoln Electric Company
- Marathon Pipe Line LLC
- National Fuel Gas Supply Corp.
- NDT Systems & Services Inc.
- Pacific Gas & Electric Co.
- Panhandle Energy Company
- Rosen
- Shell Pipeline Company LP
- Siemens Energy & Automation, Inc.
- Solar Turbines Inc.
- Southern California Gas Co.
- Southern Natural Gas
- Spectra Energy Transmission, LLC
- T.D. Williamson, Inc.
- Tennessee Gas Pipeline
- Transwestern Pipeline Co.
- Williams Gas Pipeline

Gasum Oy
National Grid
N.V. Nederlandse Gasunie
GDF Suez
Total S.A.

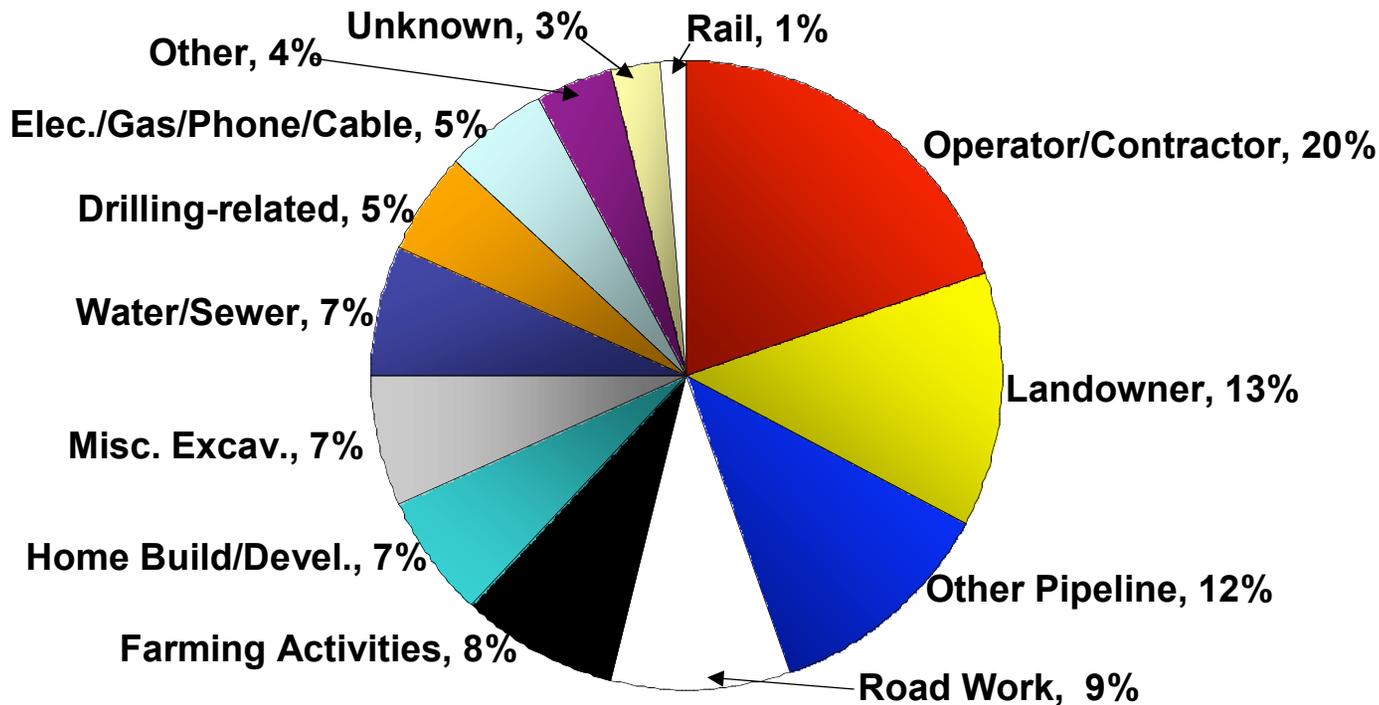

Saudi Aramco

Damage Prevention & ROW Monitoring Drivers & Challenges

Causes of Damage to Pipelines

6

Outside force damage is the single greatest cause of pipeline failures

Mechanical Damage is single largest cause of on-shore pipeline damage

>90% of all incidents occur immediately

>70% occur without One Call being made

(source Visitless Integrity Assessment Ltd., 2009)

Excavation damage, 2002-03

(OPS data, from GRI 8747)

Impacts of Damage to Pipeline Systems

7

- **Safety - Toxic & Heat Injury; staff, contractors, landowners, public**
- **Environmental Performance**
 - *Contamination - soil, ground water, and air*
 - *Liability for natural resource impacts and damages*
 - *LAUFE – emphasis on greenhouse gas releases*
- **Financial & Economic Considerations**
 - *Keeping product in the pipe and delivery to market – revenue impacts*
 - *Paying for environmental liabilities - remediation, NRD, 3rd party claims*
 - *Pipeline and facilities repair costs*
- **Public Perception & Corporate Citizenship**
 - *Reputation – public and stockholders*
 - *Enhanced awareness*
 - *License to operate*

Damage Prevention – Why is This so Challenging?

8

- **Substantial mileage of SYSTEMS - transmission and distribution**
- **Varying needs based on unique conditions for each operator**
- **No single technology can address all pipeline issues – tiered approach, multiple technologies**
- **Monitoring Frequency and timing**
- **Resource limitations**
- **Accuracy and reliability of databases (upkeep)**
- **Sensitivity of Measurement systems**
- **Effective communication with multiple stakeholders, and existing databases – DIRT, One Call, etc.**
- **“If You Build it They Will Come” – Increasing Encroachment**

When Prevention Fails – Mechanical Damage Due to Contact

9

- Coating damage, removal
- Dent (re-rounded), pipe ovalization
- Stress, strain concentration
- Metal removal, ploughing, gouge
- Surface & sub-surface cracking
- Sub-surface deformation
- Time-dependent cracking
- Nearby weld, corrosion
- Leak vs. Rupture; Time-delayed Failure
 - *Tracks 2, 3 & 4*

When Prevention Fails – Damage From Natural Forces

10

Monitoring and Detection of Change

- **Landslides**
- **Faults, Earthquakes**
- **Subsidence & sinkholes**
- **Erosion**
- **Flooding**

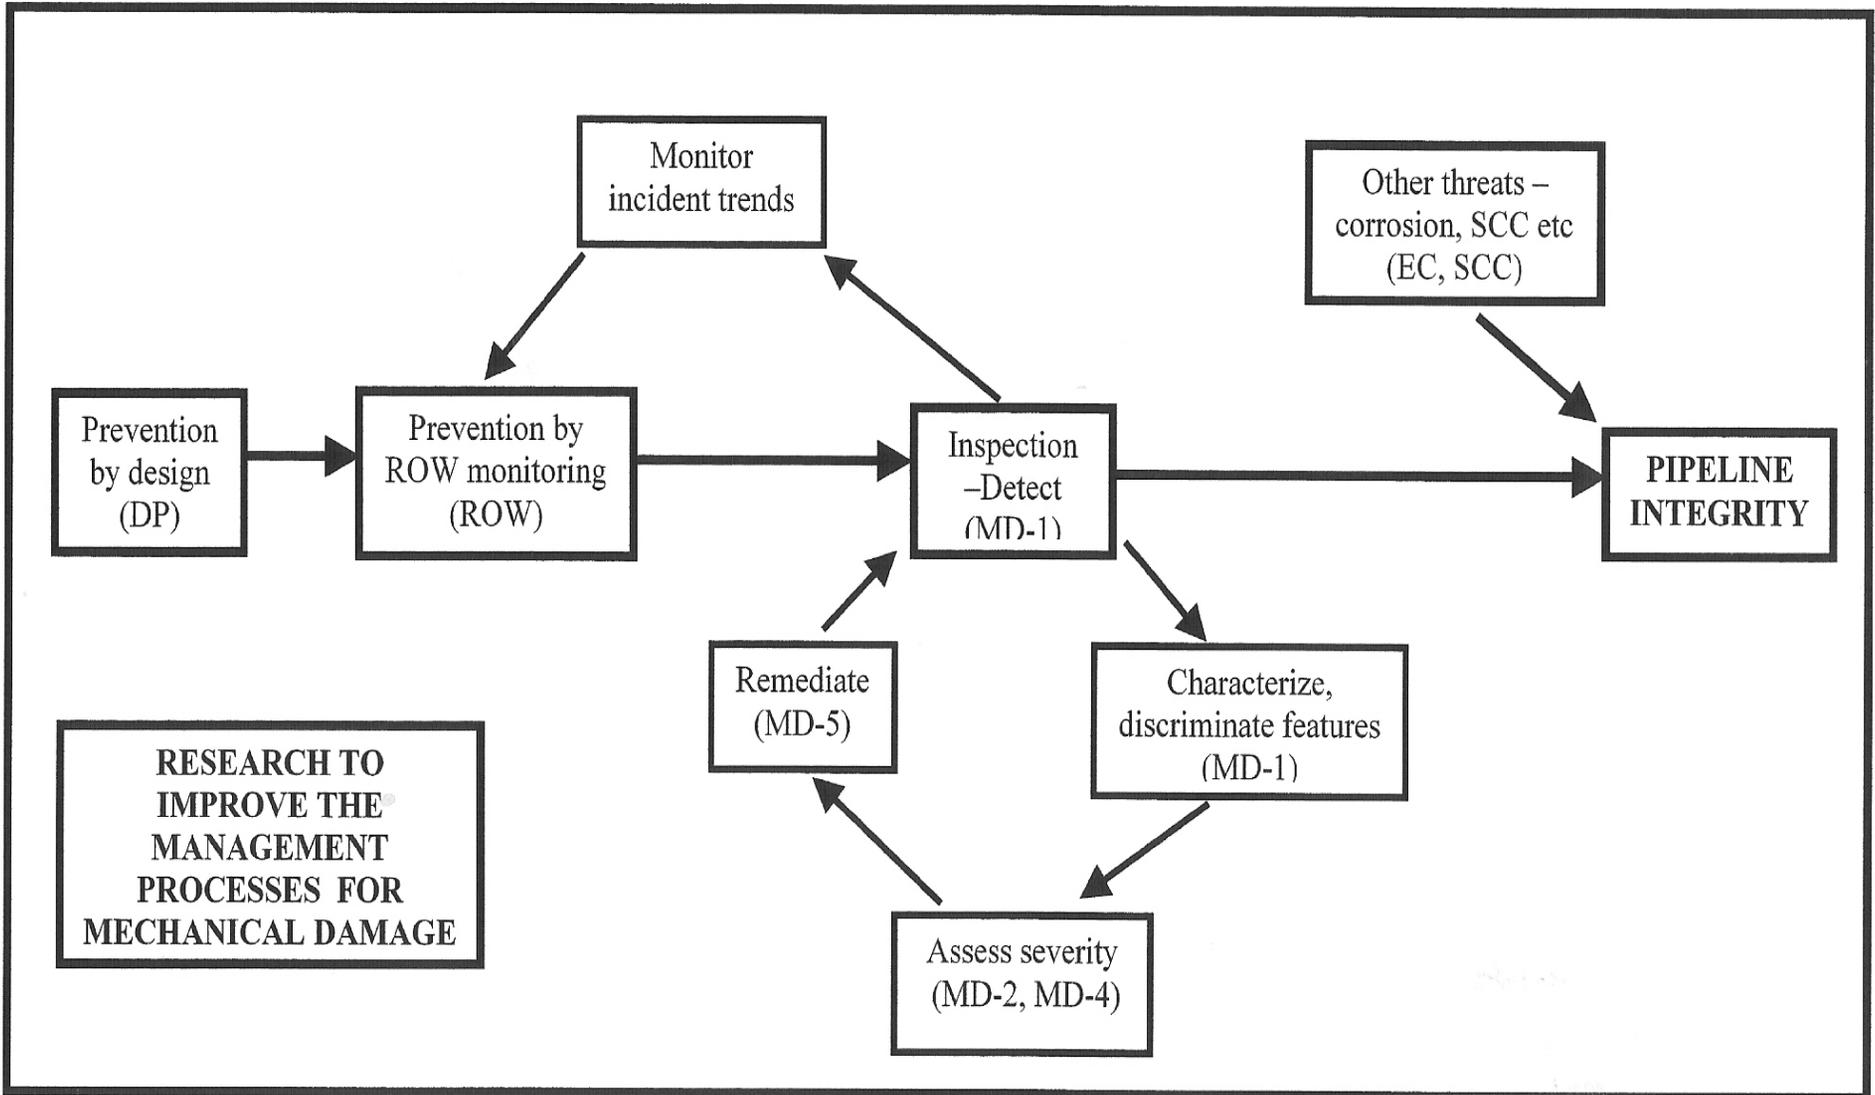

PRCI Roadmap – Damage Prevention

11

- **Developing the means to detect, assess, and prevent the damage to pipelines caused by outside forces such as excavation equipment and ground movement;**
- **Better understanding of current situation – successes and failures – identify ‘menu’ of good practice for each pipeline location**
- **Identify gaps and weaknesses in current practice – techniques, procedures, human factors – and develop solutions**
- **Explore opportunities for ‘next generation’ solutions, incorporating technologies from other industries**
- **Assessing the human factors influences and impacts in pipeline operations control centers and the development of protocols for normal and abnormal operating conditions**

our goal zero hits

Research to Improve IM processes

PRCI Research Focus

13

- **Right-of-Way Monitoring & Management**
 - *Best practices to prevent mechanical damage to pipelines*
 - *Technologies to accurately and cost-effectively detect and identify unauthorized activity near pipelines*
 - *Measuring the effectiveness of current ROW monitoring techniques/practices*
 - *Development of Pipeline Encroachment Prediction Models*
 - *Analysis and development of acoustic monitoring technology*
 - *Right of Way Automated Monitoring*

- **Damage Prevention Technologies & Human Factors**
 - *Survey of good operator practice (DP1-1)*
 - *Utilization of a ground positioning satellite device in conjunction with a current one-call system (DP 1-4)*
 - *DP-3 - Human Factors Analysis of Pipeline Monitoring & Control Operations*
 - *DP 3-2 - Influence of Human Factors on Pipeline Damage Prevention*
 - *Acoustic monitoring technology*

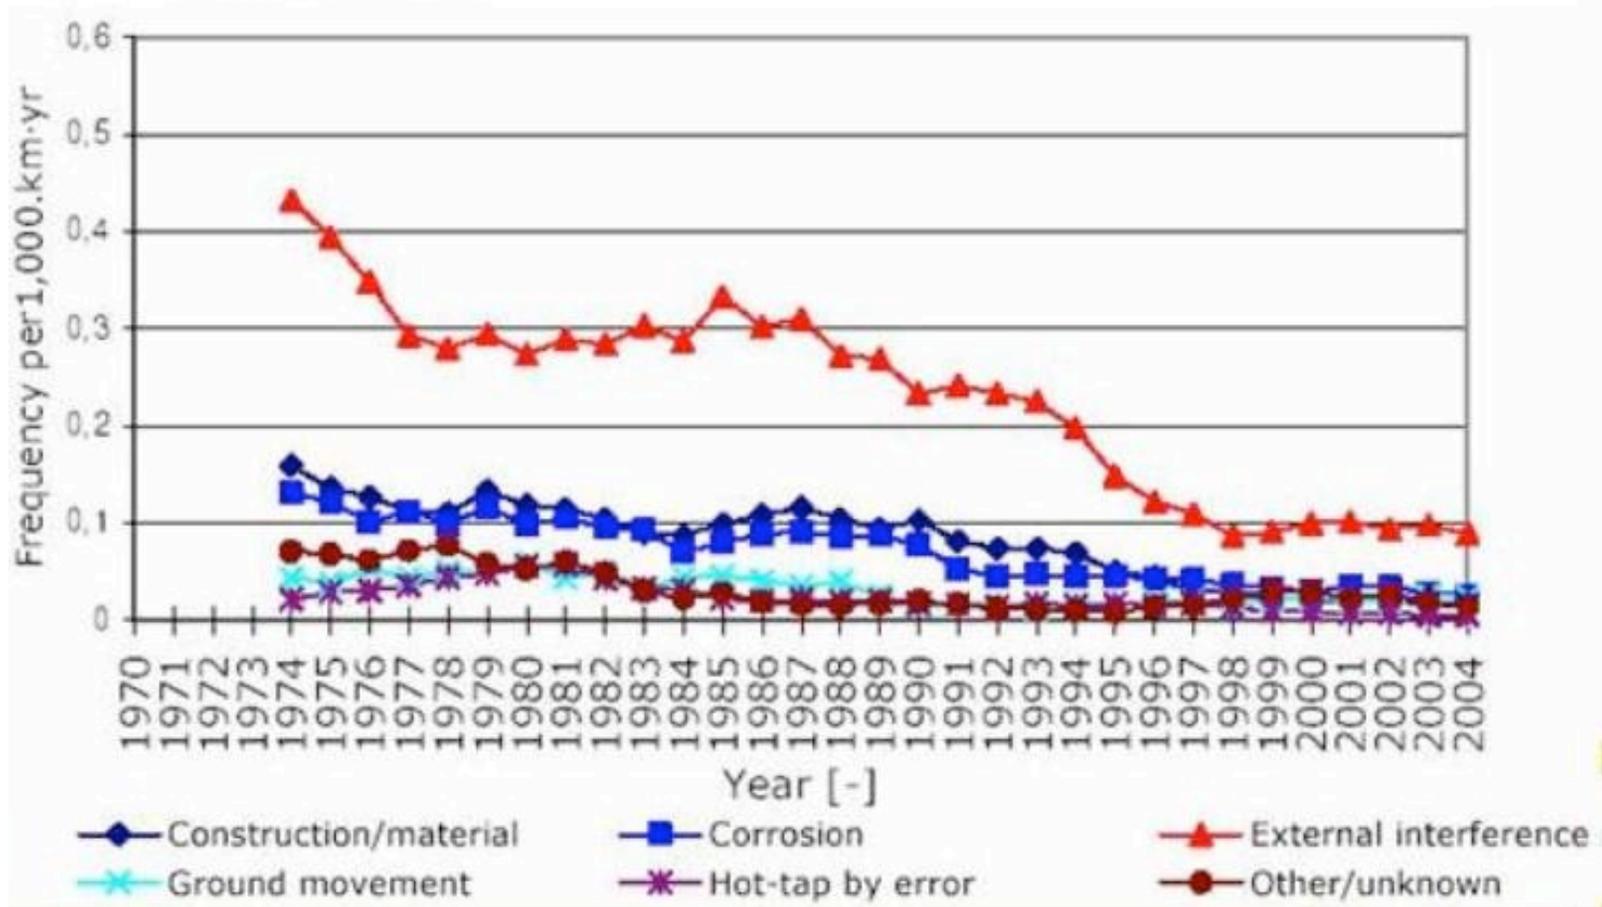

Expected Outcomes – Damage Prevention

14

- A **benchmark of current** mechanical damage prevention **practices/measures** and their effectiveness
- A **'menu' of good damage prevention practices** and technologies, taking into account individual pipeline locations, attributes and operational circumstances
- **Improved public awareness guidance** and behavioral compliance measures for controlling ROW activity
- Identified opportunities for developing and demonstrating **'next generation' technologies** for ROW monitoring and pipe/facility location – RAM Presentation

Damage Prevention Metrics

15

(European Gas Industry Data Group 6th report)

Getting better, but room for further improvements

Key Industry Challenges and R&D Needs

16

- **Improve understanding of current system performance and capabilities**
– POI, POD, POFC; aerial patrol, ground surveillance, satellite, etc.
- **Improved integration of industry-government databases; mining existing information and extracting the value – Predictive Modeling**
- **Developing new technologies that can be integrated into existing platforms**
- **Application of emerging technologies - new constellation of satellites, UASs**
- **Advanced algorithms and sensors –spatial & spectral resolution**
- **Standard/guidelines supporting selection of appropriate monitoring method – PFD or decision-tree diagrams**
- **Real time processing, communication, and reporting**
- **Continued focus on public awareness and Best Practices**
